* Australian and New Zealand Environment Conservation Council (ANZECC) 90% Marine Water Quality Guideline Value - for highly disturbed systems

^l (ANZECC) Based on a low reliability trigger value

^{ib} (ANZECC) Trigger value of 7µg/L is below laboratory detection level. The PQL of C6-C36 (490 µg/L) has been adopted as the criteria value.

^{ibc} (ANZECC) Freshwater figure adopted for marine environment in the absence of reliable marine data

^l (ANZECC) Indicative interim working level that may be used until further data becomes available

^l (ANZECC) 95% Marine Water Quality Guideline Value adopted from Table 8.3.7 based on a pH of 8 - for slightly to moderately disturbed systems
